                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2778
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2435
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2658
```

The present polypeptide.

sequence Human

VDRR

encodes a human DRR polypeptides

vitamin D receptor related (VDRR) and substances which affect VDRR

CC signal transduction, can be used for treating metabolic, proliferative cor inflammatory conditions. They can be used in the manufacture of a CC medicament for treating the following conditions: obesity, diabetes, CC anorexia, lipoprotein defects, hyperlipidaemia, hypercholesterolaemia or CC hyperlipoproteinaemia and osteoporosis, rheumatoid arthritis, benign and CC malign tumours, hyperproliferative skin disorders or hyperthyroldism.

CC Nucleic acid vectors encoding for expression of a VDRR polypeptide can CC be used for treating metabolic, proliferative or inflammatory conditions, by introducing them into a mammal. The introduced nucleic acid is then CC capable of transforming a cell in vivo and then polypeptide is expressed.

CC A substance affecting VDRR signal transduction, such as an agonist or CC antagonist can be used for the manufacture of a medicament for treating CC metabolic, proliferative or inflammatory condition.

CC N.B. The specification specifically claims the VDRR nucleic acid and CC polypeptide sequences given in figures 1, 4, 7 and 8, but no figures are given in the specification.

                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes the isolation of the novel human nuclear receptors nNR7 or nNR7-1. The nNR7 and nNR7-1 proteins are useful in the identification of downstream target genes and ligands regulating its activity. The nuclear receptor is involved in the regulation of in vivo cell proliferation and/or cell development. The nNR7 and nNR7-1 polynucleotides, expression vectors and host cells are useful for the recombinant production of the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Chen

                                                                                                                                                                                                                                                    The invention provides an isolated human nuclear receptor (designated pregnane X receptor, PXR) that binds to a cytochrome P-450 mono-oxygenase (CYP) promoter. The hPXR is used to identify: its specific modulators, and compounds that induce CYP3A4 expression (i.e. to identify drug interactions, since CYP3A4 is involved in many biotransformations of drugs). The modulators are potentially useful for: associating particular diseases and conditions with PXR and for treating such conditions. Antibodies raised against hPXR can be used for determination and purification of hPXR. The present sequence represents a DNA encoding the hPXR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human

Blumberg B, Evans RM;

New steroid and xenobiotic receptor, used to identify modulators for controlling metabolism of steroids and xenobiotics, e.g. reducing their toxicity

Claim 10; Fig 1A; 83pp; English.

CC The invention relates to a novel nuclear receptor polypeptide, designated CC SXR (steroid and xenobiotic receptor). SXR (i) forms a heterodimer with CC retinoid X receptor (RXR), (ii) binds to a direct or inverted repeat CC response element motif based on the half-site ACTTCA, (iii) activates CC transcription through response elements present in steroid-inducible P450 CC genes, in response to a wide variety of natural and synthetic steroid CC hormones and (iv) is prominently expressed in liver and intestine. SXR CC regulates expression of catabolic enzymes, in response to many different CC steroids, and thus affects metabolism. SXR is a broad specificity, low-cc affinity receptor for reducing excessive levels of steroids in the CC circulation. (Ant)agonists of SXR are used to regulate metabolism of CC steroids particularly phytoestrogens or calcium-channel blockers, to CC reduce steroid toxicity in subjects being treated with steroids, e.g. in CC cases of tuberculosis (treated with rifampin and related compounds), CC treated with vitamin K), or to slow metabolism of therapeutic steroids. CC Also, modulating endogenous SXR is used to treat disease, particularly an agonist is used where endogenous steroid levels are excessive (e.g. CC cushing syndrome, virilism and hirsutism in women; polycystic ovarian CC dehydrogenase deficiency, or breast, colorectal or prostatic cancer), while antagonists are used where endogenous steroid levels are too low. CC cells that express SXR are used to identify compounds likely to be involved in undesirable drug interactions. Antibodies specific for SXR cc antagonist. The present sequence represents the longest SXR CDNA clone cc encoding the SXR polypeptide.

The protein can be used for the development of drugs and diagnosis and treatment of various diseases.

The protein can be used for the development of drugs and diagnosis and treatment of various diseases.

The nucleic acid sequence was isolated from a human adult cDNA library using a swellfish ANO23 derived probe. The protein can be used for the development of drugs and diagnosis and treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New intranuclear receptor protein - useful for drug development and diagnosis and treatment of disease

The isoform differs from the normal receptor (VDR0), which is encoded by the present sequence, in having the vitamin D response element curtailed by 86 residues, and having & extra 19 residues inserted at the C-terminal of this element. It acts as a dominant negative receptor in the vitamin D signal transmission channel.

The coding sequence is incorporated into a recombinant baculovirus vector for transformation of the insect host. The rat version of the coding sequence was published in Burmester et al., Proc.Natl. Acad.Sci USA 85;9499-9502 (1988)

Claim 4; Fig 6; 56pp; English New polynucleotides which encode novel isoforms of the human vitamin D receptor or yariant transcripts for hVDR

The invention relates to isolated polynucleotides which encode novel isoforms of the human vitamin D receptor (VDR) or variant transcripts for hVDR. The polynucleotides are useful in methods for detecting agonist and for antagonist compound of a VDR isoform. An increase or decrease in activity of the receptor may be detected by measuring changes in interactions with known cofactors (e.g. SRC-1, GRIP-1 and TFIIB) or unknown cofactors (e.g. through use of the dual hybrid system). The polynucleotides shown in x34787, x34791 and x34792 (corresponding to hVDR exon sequences) may be useful as probes for the detection of VDR variant transcripts and for assessing cell or tissue-specific expression of variant transcripts. The present sequence represents the nucleotide sequence of hVDR gene transcript 9.
